Capital and Exploration					
Expenditures	4,867	4,169	17	8,999	-46

IRVING, Texas – April 27, 2018 – Exxon Mobil Corporation today announced estimated first quarter 2018 earnings of \$4.7 billion, or \$1.09 per share assuming dilution, compared with \$4 billion a year earlier. Cash flow from operations and asset sales was \$10 billion, including proceeds associated with asset sales of \$1.4 billion. During the quarter, the corporation distributed \$3.3 billion in dividends to shareholders. Capital and exploration expenditures were \$4.9 billion, up 17 percent from the prior year.

Oil-equivalent production was 3.9 million barrels per day, down 6 percent from the first quarter of 2017. Excluding entitlement effects and divestments, oil-equivalent production was down 3 percent from the first quarter of 2017.

"Increased commodity prices, coupled with a focus on operating efficiently and strengthening our portfolio, resulted in higher earnings and the highest quarterly cash flow from operations and asset sales since 2014," said Darren W. Woods, chairman and chief executive officer. "Through new discoveries and acquired acreage, we've positioned our Upstream portfolio well for future growth. We also made good progress on our plans to improve the production mix and grow premium product sales in the Downstream and Chemical businesses."

First Quarter 2018 Business Highlights

Upstream:

- Crude and natural gas prices strengthened in the first quarter. ExxonMobil's crude realizations were impacted by an increased discount in Western Canada, notably for heavy crudes, as Canadian supply exceeded pipeline and rail capacity. The logistics constraints in Canada supported the decision to accelerate Syncrude turnaround activities into the first quarter.
- Natural gas prices were supported by strong seasonal demand with colder weather across Europe and the U.S. and higher crude-linked LNG prices.
- As expected, higher prices reduced entitlement volumes.
- Following a severe earthquake in Papua New Guinea on February 26, operations at the PNG LNG project were temporarily shut down while the company responded with humanitarian relief for impacted communities and worked to fully restore operations. The project safely resumed LNG production ahead of schedule in mid-April. The impact of the earthquake reduced earnings by \$80 million and production by 25,000 oil-equivalent barrels per day.
- The Hebron field in Canada, which started up last year, has ramped up to produce 14,000 oil-equivalent barrels per day in the first quarter with well performance exceeding expectations.
- Development of the company's U.S. unconventional acreage is progressing with 27 operated rigs in the Permian and four operated rigs in the Bakken. Permian and Bakken unconventional production has experienced 18 percent growth year-over-year.

Downstream:

- Global refining margins remained generally strong, especially in North America. Petroleum product demand was seasonally lower.
- Overall manufacturing reliability improved from one-time fourth quarter events. A significant focus during the quarter was
 on returning the refinery in Joliet, Ill., back to full capacity in March, capturing attractive margins on weaker Canadian
 crude prices.

Chemical:

- ExxonMobil continued to make significant progress in growing the business. The integration of Jurong Aromatics
 Corporation into the existing Singapore business is progressing as planned, contributing 340,000 metric tons of sales
 during the quarter.
- The North America Growth project is also progressing well with the new polyethylene lines in Mont Belvieu, Texas, increasing sales volumes in the quarter.
- As expected, incremental activity associated with startup and commissioning of these new facilities increased expenses during the quarter.
- Within the base business, large planned turnarounds in the Middle East and the Gulf Coast were successfully completed.

Strengthening the Portfolio

- ExxonMobil announced its seventh oil discovery offshore Guyana with the completion of the Pacora-1 exploration well.
 The well encountered approximately 65 feet (20 meters) of high-quality, oil-bearing sandstone reservoir.
- During the quarter, the company increased its holdings in Brazil's pre-salt basins after winning eight additional exploration blocks, six of them to be operated by ExxonMobil, during the latest bid round. The company added more than 640,000 net acres to its existing deepwater portfolio offshore Brazil, and is now one of the largest acreage holders among international oil companies in the country.
- ExxonMobil announced that its estimate of the size of the natural gas resource at the P'nyang field in Papua New Guinea (PNG) has increased to 4.36 trillion cubic feet of gas, an 84 percent increase from the previous assessment completed in 2012. This increase, based on an independent recertification study, supports a potential three-train expansion concept of the PNG LNG plant.
- ExxonMobil sold its 50 percent ownership interest in the Scarborough gas field, offshore Western Australia, to Woodside Petroleum Ltd. In the Downstream, the company closed several divestments, including distribution and marketing assets in South America, and retail sites in Europe.
- During the quarter, ExxonMobil added to its exploration portfolio offshore West Africa by signing an agreement with the
 government of Ghana to acquire exploration and production rights for the Deepwater Cape Three Points block.
 ExxonMobil also signed an agreement with a subsidiary of Galp Energia, SGPS, S.A. for a 40 percent farm-in to a
 deepwater license offshore Namibia. Both agreements are subject to government approvals.

Investing for Growth

- The company began commissioning its new ethane cracker in Baytown, Texas. The cracker, expected to start up mid-year 2018, will produce 1.5 million metric tons per year of ethylene feedstock for the new polyethylene lines at the company's plastics plant in Mont Belvieu, Texas.
- The company also continued its entry into Mexico's fuels market with the opening of new Mobil-branded service stations operated by Grupo Orsan and Grupo Combured. The new stations will be supplied with gasoline and diesel produced by ExxonMobil's refineries in Texas.

Advancing Innovative Technologies and Products

• During the quarter, ExxonMobil and Synthetic Genomics, Inc. announced a new phase in their joint algae biofuel research program that could lead to the technical ability to produce 10,000 barrels of algae biofuel per day by 2025.

First Quarter 2018 Financial Updates

During the first quarter of 2018, Exxon Mobil Corporation purchased 5 million shares of its common stock for the treasury at a gross cost of \$425 million. These shares were acquired to offset dilution in conjunction with the company's benefit plans and programs. The corporation will continue to acquire shares to offset dilution in conjunction with its benefit plans and programs, but does not currently plan on making purchases to reduce shares outstanding.

Effective January 1, 2018, ExxonMobil adopted the Financial Accounting Standards Board's standard, Revenue from Contracts with Customers (Topic 606), as amended, using the Modified Retrospective method. ExxonMobil also adopted the Financial Accounting Standards Board's Update, Financial Instruments – Overall (Subtopic 825-10): Recognition and Measurement of Financial Assets and Financial Liabilities. ExxonMobil also adopted the Financial Accounting Standards Board's Update, Compensation – Retirement Benefits (Topic 715): Improving the Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost.

The adoption of these standards did not have a material impact on the corporation's financial statements. The cumulative effect of adoption of the new standards was de minimis.

ExxonMobil will discuss financial and operating results and other matters during a webcast at 8:30 a.m. Central Time on April 27, 2018. To listen to the event or access an archived replay, please visit www.exxonmobil.com.

Cautionary Statement

Statements relating to future plans, projections, events or conditions are forward-looking statements. Future results, including project plans, costs, timing, and capacities; business growth; integration benefits; resource recoveries; the impact of new technologies; and share purchase levels, could differ materially due to factors including: changes in oil, gas or petrochemical prices or other market or economic conditions affecting the oil, gas or petrochemical industries, including the scope and duration of economic recessions; the outcome of exploration and development efforts; timely completion of new projects; changes in law or government regulation, including tax and environmental requirements; the impact of fiscal and commercial terms and outcome of commercial negotiations; the results of research programs; changes in technical or operating conditions; actions of competitors; and other factors discussed under the heading "Factors Affecting Future Results" in the "Investors" section of our website and in Item 1A of ExxonMobil's 2017 Form 10-K. We assume no duty to update these statements as of any future date.

Frequently Used Terms and Non-GAAP Measures

This press release includes cash flow from operations and asset sales. Because of the regular nature of our asset management and divestment program, we believe it is useful for investors to consider proceeds associated with the sales of subsidiaries, property, plant and equipment, and sales and returns of investments together with cash provided by operating activities when evaluating cash available for investment in the business and financing activities. A reconciliation to net cash provided by operating activities is shown in Attachment V.

This press release also includes earnings excluding impacts from U.S. tax reform enactment and asset impairments. We believe these figures are useful for investors to consider in comparing the performance of our underlying business across periods when one, or both, periods have been impacted by the U.S. tax reform or an asset impairment charge. A reconciliation of earnings excluding these items to U.S. GAAP earnings is shown in Attachment II.

This press release also includes total taxes including sales-based taxes. This is a broader indicator of the total tax burden on the corporation's products and earnings, including certain sales and value-added taxes imposed on and concurrent with revenue-producing transactions with customers and collected on behalf of governmental authorities ("sales-based taxes"). It combines "Income taxes" and "Total other taxes and duties" with sales-based taxes, which are reported net in the income statement. We believe it is useful for the corporation and its investors to understand the total tax burden imposed on the corporation's products and earnings. A reconciliation to total taxes is shown in Attachment I.

References to the resource base and other quantities of oil, natural gas or condensate may include amounts that are not yet classified as "proved reserves" under SEC definitions, but which we believe will likely be moved into the "proved reserves" category and produced in the future. The term "project" as used in this release can refer to a variety of different activities and does not necessarily have the same meaning as in any government payment transparency reports. Further information on ExxonMobil's frequently used financial and operating measures and other terms including "Cash flow from operations and asset sales", and "Total taxes including sales-based taxes" is contained under the heading "Frequently Used Terms" available through the "Investors" section of our website at exxonmobil.com.

Reference to Earnings

References to corporate earnings mean net income attributable to ExxonMobil (U.S. GAAP) from the consolidated income statement. Unless otherwise indicated, references to earnings, Upstream, Downstream, Chemical and Corporate and financing segment earnings, and earnings per share are ExxonMobil's share after excluding amounts attributable to noncontrolling interests.

Exxon Mobil Corporation has numerous affiliates, many with names that include ExxonMobil, Exxon, Mobil, Esso, and XTO. For convenience and simplicity, those terms and terms such as corporation, company, our, we, and its are sometimes used as abbreviated references to specific affiliates or affiliate groups. Similarly, ExxonMobil has business relationships with thousands of customers, suppliers, governments, and others. For convenience and simplicity, words such as venture, joint venture, partnership, co-venturer, and partner are used to indicate business and other relationships involving common activities and interests, and those words may not indicate precise legal relationships.
