Wouldn't we all want this job? @ExxonMobil and @Porsche are teaming up to test new, lower-carbon fuels in Porsche's high-performance motorsports engines during Porsche Mobil 1 Supercup race series. This year we're testing a blend of primarily advanced biofuels, formulated by our own in-house team of scientists and engineers – this is an engineer's dream job! Even cooler: our collaboration with Porsche will also focus on eFuels (synthetic fuels made from hydrogen and captured CO2). The eFuel we're testing is anticipated to achieve a greenhouse gas emissions reduction of up to 85% when blended for today's passenger vehicles. See more about this exciting initiative here. We're racing into the future with Porsche, developing lower-emission Esso Renewable Racing Fuel and testing it at the Porsche Mobil 1 Supercup. Made with wind power, carbon capture and methanol-to-gasoline technology this eFuel has the potential to achieve a greenhouse gas emissions reduction of up to 85% when blended to current passenger vehicle fuel standards. As a lower-carbon alternative fuel for today's vehicles when compared to gasoline, eFuels could help drive us into a lower-emission future.
